Scroll Animation & 3D Website

AI Build-Prompt Library — v2

A reusable set of copy-paste prompts — one AI-video animation prompt plus seven website build prompts (Next.js 14 · GSAP ScrollTrigger · Lenis · React Three Fiber). This version adds a new luxury women's dress shop e-commerce prompt (08).

---

01 Left → Right Head-Turn Animation

Type: AI video generation (image-to-video) | Stack: Higgsfield / Kling / Veo

COPY-PASTE PROMPT

The creature slowly and smoothly turns its head from left to right at a steady, natural pace. Its eyes follow the movement naturally. The body stays mostly still, facing forward. Keep the same cute surprised expression, slightly open mouth, visible front teeth, tiny paws, fluffy fur, and soft natural motion. Keep the environment, lighting, composition, and character design unchanged. No camera movement, no zoom, no cuts, no scene change. The motion should feel gentle, subtle, and realistic, like a curious little creature looking around.

Original video prompt — kept as-is for reference.

02 KTM Bike — 3D Scroll Website

Type: Scroll-driven 3D product site | Stack: Next.js 14 · R3F/drei · GSAP ScrollTrigger · Lenis

COPY-PASTE PROMPT

Build a premium single-page product website for a KTM-style performance motorcycle using Next.js 14 (App Router) + TypeScript + Tailwind CSS, with a scroll-driven 3D experience.

TECH: @react-three/fiber, @react-three/drei, three, gsap + ScrollTrigger, @studio-freight/lenis. Load a bike model from /public/models/bike.glb via useGLTF (preload it). Wrap the Canvas in Suspense with a loading progress bar (drei useProgress).

SETUP: Initialise Lenis for smooth scroll and sync it with GSAP ScrollTrigger — on Lenis 'scroll' call ScrollTrigger.update, drive lenis.raf from gsap.ticker, set gsap.ticker.lagSmoothing(0). Set DPR to [1,2] and clamp on mobile.

SCROLL DRIVER: The 3D scene is pinned/fixed behind the content. One ScrollTrigger (scrub:1) spanning the whole page maps progress 0→1 to: camera dolly + orbit around the bike, bike Y-rotation, and a staged 'exploded view' where engine, wheels and bodywork separate then reassemble. Lerp values in useFrame so motion never snaps.

SECTIONS (each a full-viewport scroll beat, text overlaid beside the pinned bike):
1. HERO — dark stage, bike emerges from shadow, headline 'READY TO RACE'. Orange (#FF6600) accent on near-black (#0A0A0A), condensed uppercase display type.
2. ENGINE — camera pushes in, spec callouts (displacement, power, torque) as animated counters.
3. CHASSIS & SUSPENSION — rotate to 3/4 rear, trellis frame + WP suspension marked with thin leader lines.
4. WHEELS & BRAKES — low angle, wheels spin, brake-disc callout.
5. COLORWAY CONFIGURATOR — three swatches (Orange / Black / White) that tween the bike material colour; bike does a slow full turn.
6. SPECS + CTA — full spec sheet, sticky 'Book a Test Ride' button.

FEEL: constant cinematic camera velocity, no hard cuts. Headlines split into spans and reveal word-by-word (gsap.from y:110%, stagger 0.05, ease power4.out) per section. Thin scroll-progress indicator on the right edge.

PERFORMANCE: Draco-compress the GLB, lazy-load the Canvas, DPR clamp, and show poster images / disable the 3D scene on prefers-reduced-motion. Fully responsive; reduce orbit range and explosion distance on mobile. Deliver Scene.tsx, BikeModel.tsx, a useScrollProgress hook, section components and a Lenis provider.

03 Lenis Smooth Scroll + GSAP Products Hero

Type: Reusable pinned product-swap hero section | Stack: Next.js 14 · GSAP ScrollTrigger · Lenis

COPY-PASTE PROMPT

Build a reusable premium 'products animation hero' section in Next.js 14 (App Router) + TypeScript + Tailwind, powered by Lenis smooth scroll and GSAP ScrollTrigger. A pinned hero where one hero product morphs/swaps through a set of products as the user scrolls, while the page accent colour and background transition to match each product.

TECH: gsap + ScrollTrigger, @studio-freight/lenis, next/image. Pure DOM + transforms (no 3D), but keep it 60fps.

LENIS + GSAP SYNC (client provider): const lenis = new Lenis({ lerp:0.1, smoothWheel:true }); lenis.on('scroll', ScrollTrigger.update); gsap.ticker.add(t => lenis.raf(t*1000)); gsap.ticker.lagSmoothing(0); then ScrollTrigger.refresh() after mount.

DATA: array of 4–5 products — { name, image (transparent PNG), accentColor, tagline, price }.

HERO BEHAVIOUR — one pinned ScrollTrigger (pin:true, scrub:1, end long enough for all products):
• The current product sits centre, large. As progress crosses each product's segment, the outgoing product scales down + rotates slightly + blurs out while the incoming one scales 0.8→1 with a subtle rotateY tilt and settles — a clean cross-swap, never a hard cut.
• Background + accent tween between each product's accentColor (gsap.to on a CSS variable --accent that drives background, text and buttons).
• A big index (01/05) and the product name reveal with a masked word animation on each swap (y:110%→0, overflow hidden).
• Parallax: a soft radial glow and a couple of decorative shapes drift at different scroll speeds behind the product.
• Left column: animated tagline + price + an 'Add to cart' pill that recolours to the active accent.

EXTRAS: a segmented progress bar (one segment per product) that fills as you pass each; dot navigation that lenis.scrollTo each segment. On prefers-reduced-motion disable pin/scrub and stack products statically.

DESIGN: editorial, lots of whitespace, oversized display heading, smooth 0.6–0.9s eases (power3/power4.inOut). Deliver as <ProductHero products={...} /> plus a LenisProvider and a useScrollColor helper so I can drop it into any project.

04 Real Estate — 3D Scroll Website

Type: Cinematic scroll site (image-sequence + optional 3D) | Stack: Next.js 14 · Canvas sequence / R3F · GSAP · Lenis

COPY-PASTE PROMPT

Build a luxury real-estate landing page in Next.js 14 (App Router) + TypeScript + Tailwind with a cinematic scroll-driven experience. Use GSAP + ScrollTrigger and Lenis for smooth scroll; use a canvas image-sequence scrub for the hero building reveal, with an optional @react-three/fiber path for an orbitable 3D building model (make it a toggleable approach).

HERO — canvas image sequence: preload a numbered frame sequence (/public/seq/tower_0001.webp … _0120.webp — a drone fly-in or slow building turn). Draw the current frame to a full-screen <canvas>; a ScrollTrigger (pin, scrub:1) maps scroll progress to frame index (Math.round(progress*(total-1))). Overlay the project name + tagline that fade as you scroll into the building. Show a loading screen with % while frames preload.

LENIS + GSAP SYNC as standard (lenis 'scroll' → ScrollTrigger.update, gsap.ticker drives raf, lagSmoothing(0)).

SECTIONS AFTER HERO:
1. STORY — pinned text with word-stagger reveal, muted luxury copy.
2. AMENITIES — horizontal-scroll gallery: a pinned section that translates a row of cards left as you scroll down (x = -(scrollWidth - viewport) * progress), each image parallaxing.
3. RESIDENCES / FLOOR PLANS — tabs (1BR / 2BR / 3BR / Penthouse) with an animated floor-plan SVG and specs (area, beds, baths, price-from).
4. LOCATION — map with animated pins / neighbourhood highlights revealed on scroll.
5. GALLERY — masonry with reveal-on-scroll (clip-path / y stagger).
6. ENQUIRE — sticky enquiry form (name, email, phone, unit type, message) posting to /api/enquiry, plus availability status.

OPTIONAL 3D MODE: swap the hero image-sequence for an R3F <Canvas> with a building GLB the camera orbits on scroll (same scroll-progress driver), Suspense + drei Environment for soft lighting.

FEEL: slow, expensive, continuous camera motion; generous fades; parallax on every image block.
DESIGN: minimal luxury — warm neutral palette (bone / taupe / charcoal), an elegant serif display for headings via next/font, refined sans body, thin gold hairlines, lots of negative space. Fully responsive; on mobile drop the sequence to a short autoplay video/poster and disable heavy scrubbing on prefers-reduced-motion. Deliver clean components + a useImageSequence hook + LenisProvider.

05 Web-Slinger — Comic 3D Scroll (Spider-Man style)

Type: Cinematic curve-follow 3D scroll experience | Stack: Next.js 14 · R3F · postprocessing · GSAP · Lenis

COPY-PASTE PROMPT

Build a comic-book-style 3D scroll experience in Next.js 14 (App Router) + TypeScript with @react-three/fiber, @react-three/drei, three, gsap + ScrollTrigger, @studio-freight/lenis and @react-three/postprocessing — a stylised web-slinging superhero swinging through a city as the user scrolls.

IP NOTE: design an ORIGINAL masked 'web-slinger' hero. Do NOT use Marvel's Spider-Man name, logo, spider emblem or red-and-blue suit — use an original colour scheme and silhouette and your own/licensed GLB assets, so the site is a legally-safe homage, not a copy.

SCENE: a stylised low-poly downtown (skyscrapers, rooftops) plus a hero character GLB. Define a CatmullRomCurve3 flight path weaving between buildings. One ScrollTrigger (scrub:1) drives progress 0→1; each frame, place the camera (and the hero slightly ahead) at curve.getPointAt(progress) and lookAt a point a little further along the curve so it always faces travel direction — a continuous swinging fly-through with no cuts. Lerp in useFrame; add a sinusoidal 'swing' bob (sin(progress*n)) on the vertical axis and a slight roll for momentum.

COMIC LOOK (postprocessing): toon / cel-shaded materials (MeshToonMaterial + gradientMap), bold outlines (Outline effect or inverted-hull), a halftone dot pass, slight chromatic aberration and a high-contrast colour grade.

SCROLL BEATS (comic 'panels' as HTML over the fixed canvas):
1. ROOFTOP START — hero crouched on a ledge, big title.
2. THE DIVE — camera plunges off the building, speed lines, 'WHOOSH'.
3. SWING SEQUENCE — weaving between towers; web-lines shoot from hand to anchor points (animated Line / Trail), 'THWIP!' pops in per swing (gsap scale/rotate burst).
4. NEAR MISS — a fast dodge around a billboard.
5. HERO LANDING — three-point pose, camera settles, CTA / section content.

Lenis + GSAP sync as standard. Speed-line and halftone HTML overlays intensify with scroll velocity (read lenis velocity). Onomatopoeia words use a hand-drawn display font (next/font) with bold outline, entering on a back/elastic ease.

PERFORMANCE: Draco-compress GLBs, Suspense + progress loader, DPR clamp, and a static comic-panel fallback on prefers-reduced-motion / low-power. Fully responsive (shorten the curve, lighten postprocessing on mobile). Deliver Scene.tsx, HeroRig.tsx (curve follower), WebLines.tsx, the postprocessing setup, an Onomatopoeia component and a LenisProvider.

06 Cruise Liner — 3D Scroll Enquiry Site

Type: Scroll-driven 3D site with lead-capture form | Stack: Next.js 14 · R3F/drei · GSAP · Lenis · react-hook-form

COPY-PASTE PROMPT

Build a premium cruise-liner enquiry website in Next.js 14 (App Router) + TypeScript + Tailwind with a scroll-driven 3D experience and a lead-capture enquiry flow. Use @react-three/fiber, @react-three/drei, three, gsap + ScrollTrigger, @studio-freight/lenis.

3D SCENE (pinned behind content): a cruise-ship GLB floating on an animated ocean. Use drei Water (or a custom water shader / MeshDistortMaterial plane) with slow moving waves, an Environment/Sky for sunset light, and a gentle continuous ship bob (sin on position.y + tiny rotation.z). A page-spanning ScrollTrigger (scrub:1) maps progress to a cinematic camera move: wide establishing shot → glide along the hull → rise to reveal the top decks → pull back for the final CTA. Move the camera along a CatmullRom curve with lookAt on the ship so motion is continuous (no cuts). Lerp in useFrame.

LENIS + GSAP sync standard; Suspense + progress loader for the model.

SECTIONS (overlaid over the fixed canvas):
1. HERO — ship on open ocean at golden hour, brand name, tagline 'Sail Beyond the Horizon', scroll cue.
2. THE SHIP / DECKS — camera glides along; deck & amenity callouts fade in (pools, dining, spa, theatre) with word-stagger reveals.
3. CABIN TYPES — cards (Interior / Ocean View / Balcony / Suite) with price-from, image and 'Enquire' buttons that deep-link to the form with the cabin preselected.
4. ITINERARY — an animated route map (SVG path draws on scroll via strokeDashoffset / DrawSVG) showing ports of call; each port pops a small info card.
5. GALLERY — horizontal-scroll gallery of onboard experiences.
6. ENQUIRE NOW — the primary form: full name, email, phone, departure date (date picker), destination/route (select), guests, cabin type (prefilled), message. Validate with react-hook-form + zod; POST to /api/enquiry with success/error toast and a confirmation state.

FEEL: slow, luxurious, cinematic; constant camera velocity; soft fades; parallax on text. DESIGN: elegant premium travel — deep navy (#0B1F3A), warm gold accent (#C9A24B), ivory text, refined serif display +

clean sans body, subtle grain. Fully responsive; on mobile swap the heavy water shader for a lighter plane + poster and disable scrubbing on prefers-reduced-motion. Deliver Scene.tsx, Ship.tsx, Ocean.tsx, EnquiryForm.tsx (with the API route), the itinerary map component and a LenisProvider.

07 DRIFT — Streetwear E-Commerce Landing Page

Type: Ultra-premium animated e-commerce landing page | Stack: Next.js (App Router) · Tailwind CSS · GSAP ScrollTrigger · Lucide React

COPY-PASTE PROMPT

Role: You are an expert Frontend Developer and UI/UX Designer specializing in building ultra-premium, highly animated e-commerce websites.

Task: Build a modern, high-end streetwear e-commerce landing page for a brand named "DRIFT".

TECH STACK
Framework: Next.js (App Router) with React. Styling: Tailwind CSS (use arbitrary values for precise spacing/colors when necessary). Animations: GSAP (GreenSock) and GSAP ScrollTrigger for scroll-based animations. Icons: Lucide React. Fonts: a modern, bold sans-serif (like Inter or a geometric sans) for primary text.

DESIGN AESTHETICS & VIBE
Color Palette: Strictly Monochrome (High contrast Black #111 / "Ink" and Crisp White #FFF), with subtle off-white (#F9F9F9 or #F3F3F3) for alternating section backgrounds. No bright accent colors — keep it stark and premium. Typography: Massive, bold typography for headers (tight tracking); small, widely tracked uppercase text for overlines (e.g., tracking-[0.25em]). Components: Pill-shaped buttons, rounded cards (rounded-3xl), and subtle soft drop shadows (shadow-sm, shadow-xl).
Animations (CRITICAL): Every single section must feature a 3D Flip-In Scroll Animation using GSAP ScrollTrigger. As the user scrolls down, elements stagger in by fading from opacity: 0, translating up from y: 50, and rotating up from rotateX: -40 with transformPerspective: 1000.

SECTION-BY-SECTION BREAKDOWN
1. HERO (h-screen) — Solid white background with a massive hero image/video cutout of a streetwear model. Transparent floating navbar: logo "DRIFT" left, center nav links (Home, Shop, Collections, About), Search + Cart icons right. Left content: "NEW DROP" pill badge, massive split-line headline "Streetwear. Redefined.", short subtext, pill "Explore Collection" button. Right content: floating glassmorphism metric cards ("Premium Quality", "Limited Edition", "2.4K+ Loved by Thousands", "Follow Us" social pill). Bottom: floating horizontal stats bar (e.g., "50+ Collections").
2. PRODUCT SHOWCASE (interactive carousel, h-screen) — Split screen 60/40. Left (Stage): large centered main product image, smaller blurred queue previews bottom-left, "PREV" / "NEXT" text buttons. Bonus: GSAP Flip to animate images from queue to stage. Right (Details): breadcrumbs (HOME > SHIRTS), star ratings, massive product title, price, pill size selector, square color swatches, large black "ADD TO CART" button.
3. POPULAR PICKS (horizontal scroll) — Off-white background. "SHOP THE DROP" overline, "Popular Picks" title, circular arrow buttons. Horizontal scrolling container (hidden scrollbar) of white rounded product cards with image, name, price, circular bag icon button.
4. NEW ARRIVALS (grid) — Off-white background. "JUST ARRIVED" overline, "New Arrivals" title, 4-column grid with a small black "NEW" pill badge on each image.
5. OUR CATEGORIES (bento grid) — Solid white. One large tall card left (New Arrivals), stacked smaller cards right (Outerwear, Activewear, Clearance). Images fill cards with dark gradient overlays and a "View Collections" pill on hover.
6. IDENTITY SHOWCASE (marquee) — Centered header "Express Your Identity With Our Unique Style" + description. Infinitely looping auto-scrolling marquee of model images, framed by curved white SVG overlays top and bottom. Footer: circular spinning SVG text "SCROLL DOWN" with a down arrow.

7. FEATURED PRODUCT (split layout) — Off-white. Left: large shoe hero image + 4-column thumbnail grid. Right: "Nike Air" details — price, star ratings, "To Order" and "In Stock" cards side-by-side, Size/Color dropdowns, massive "My Drip Bag" button.
8. TESTIMONIALS — Solid white. Header "Every Pair Tells A Story Here's Theirs" with stacked avatar group and "4.5/5 Trusted By 100+ Customers". 3-column grid of review cards with huge decorative quotation mark, review text, avatar/name; middle card staggered down with translate-y.
9. FOOTER — Solid black (bg-ink) with massive faded white "DRIFT" text spanning the background. Foreground: a large white floating card (relative z-10 mx-auto) containing footer links, newsletter signup input, and copyright.

Existing prompt — carried over unchanged from the DRIFT build document.

08 AURELLE — Women's Dress Shop E-Commerce (NEW)

Type: Luxury scroll-animated dress boutique e-commerce | Stack: Next.js 14 · Tailwind CSS · GSAP ScrollTrigger · Lenis · Framer Motion (micro) · Lucide React

COPY-PASTE PROMPT

Role: You are an expert Frontend Developer and UI/UX Designer specializing in ultra-premium, highly animated fashion e-commerce websites.

Task: Build a luxury women's dress shop e-commerce landing page for a boutique brand named "AURELLE" — selling designer dresses, gowns, ethnic wear (lehengas, sarees) and occasion wear. The site must feel like a high-fashion editorial: silky, cinematic, and seamless.

TECH: Next.js 14 (App Router) + TypeScript + Tailwind CSS, gsap + ScrollTrigger (+ GSAP Flip for image transitions), @studio-freight/lenis for smooth scroll, next/image, Lucide React icons. LENIS + GSAP SYNC as standard: lenis.on('scroll', ScrollTrigger.update); gsap.ticker.add(t => lenis.raf(t*1000)); gsap.ticker.lagSmoothing(0).

DESIGN AESTHETICS & VIBE
Palette: warm ivory (#FAF7F2) base, soft blush (#F3E6E0) alternating sections, deep espresso text (#1C1512), and a single champagne-gold accent (#C9A24B) for hairlines, prices and CTAs. Typography: elegant high-contrast serif display (e.g., Playfair Display / Fraunces via next/font) for headlines, refined sans (Inter) for body; small widely tracked uppercase overlines (tracking-[0.3em]). Components: pill CTAs, tall 3:4 portrait product cards (rounded-2xl), thin gold hairline dividers, generous negative space. Animations (CRITICAL): every section reveals with a soft 'silk' entrance — elements fade from opacity 0, rise from y: 60, and un-skew from skewY: 4 with a 1.1s power4.out ease, staggered 0.08. Headlines split into masked lines that slide up (y: 110% → 0, overflow hidden). All product images have a slow Ken-Burns parallax (scale 1.15 → 1 on scroll) inside overflow-hidden frames. No hard cuts anywhere — every transition must feel continuous.

SECTION-BY-SECTION BREAKDOWN
1. HERO (h-screen, pinned) — Full-bleed editorial photo of a model in a flowing gown. Transparent navbar: serif logo "AURELLE" left, nav links (New In, Dresses, Occasion, Ethnic, About), Search / Wishlist / Cart icons right with a cart-count badge. Center-left: overline "SPRING · SUMMER '26", massive two-line serif headline "Dressed in / Poetry.", short subtext, two CTAs — gold pill "Shop the Collection" + ghost "Watch the Film". As you scroll, the hero image scales down into a rounded-3xl frame while the headline drifts up at a slower parallax speed (scrub).
2. DRESS SHOWCASE (pinned scroll carousel, h-screen) — One pinned ScrollTrigger where the featured dress swaps through 4 looks (Evening Gown / Cocktail Dress / Bridal Lehenga / Summer Midi) as the user scrolls: outgoing dress blurs + drifts left, incoming settles from scale 0.85 with a subtle rotateY — a clean

cross-swap (never a cut). Background tint tweens per dress via a CSS variable --accent. Right column: big index (01/04), dress name masked-line reveal, fabric note, price in gold, size pills (XS–XXL), colour swatches, black "Add to Bag" pill. Segmented progress bar under the index.
3. NEW ARRIVALS (grid) — Blush background. Overline "JUST IN", serif title "New Arrivals". 4-column grid (2 on mobile) of 3:4 portrait cards: image with hover zoom + quick 'second image' crossfade, small gold "NEW" pill, name, price, heart wishlist icon, and a slide-up "Add to Bag" bar on hover. Cards stagger in with the silk entrance.
4. SHOP BY OCCASION (bento grid) — Ivory background. Serif title "Shop by Occasion". Bento layout: one tall card left (Wedding & Bridal), stacked right (Evening, Casual Day, Festive Ethnic). Full-bleed imagery, soft dark gradient at the bottom, white serif labels, and a "Explore" gold pill sliding in on hover.
5. FABRIC & CRAFT (split parallax) — A pinned split section: left, a slow macro Ken-Burns video/image of silk, embroidery and zari detail; right, word-stagger copy about hand-finished craft with three animated counters (e.g., "120+ hrs handwork", "100% pure fabrics", "Made to Measure").
6. LOOKBOOK (horizontal scroll) — A pinned section translating a row of tall editorial images left as you scroll down (x = -(scrollWidth - viewport) * progress), each image parallaxing at a slightly different speed, with a thin gold progress line beneath.
7. TESTIMONIALS — Ivory. Serif header "Loved by Every Silhouette", stacked customer avatars + "4.9/5 · 500+ Happy Customers". 3-column review cards with a large decorative serif quotation mark; middle card offset down with translate-y.
8. INSTAGRAM STRIP (marquee) — Infinite auto-scrolling marquee of square feed images with an "@aurelle.official — Follow Us" center pill; marquee speed eases with lenis scroll velocity.
9. NEWSLETTER + FOOTER — Espresso-dark footer with massive faded serif "AURELLE" spanning the background. Foreground floating ivory card: newsletter input ("Get 10% off your first dress"), link columns (Shop, Help, Size Guide, Shipping & Returns, Contact / WhatsApp), payment icons (UPI, Visa, Mastercard, Razorpay), and copyright.

E-COMMERCE BEHAVIOUR: client-side cart state (context) with a slide-in cart drawer (backdrop blur, item list, qty steppers, subtotal, gold "Checkout" pill wired for Razorpay later); wishlist toggle persisted in memory; size-guide modal; product data from a typed products.ts array { name, images[], price, mrp, fabric, occasion, sizes[], colors[] } so real inventory can be dropped in.

PERFORMANCE & A11Y: next/image with priority hero, lazy sections, will-change only during tweens, prefers-reduced-motion disables pin/scrub and shows static layouts, semantic landmarks + alt text, fully responsive (carousel becomes swipe cards and lookbook becomes native horizontal scroll on mobile). Deliver page.tsx, section components, CartDrawer.tsx, a LenisProvider and a useSilkReveal hook.

NEW — added in this version of the library.
